

NOTICE PRELIMINARY DECISION OF PART 4, & PART 5, *OFFSETS*, OF DISTRICT RULE 207,
REVIEW OF NEW OR MODIFIED SOURCES (NSR)

Pursuant to District Rule 207, Section 6.9, the Monterey Bay Air Resources District (MBARD) solicits written comments to the preliminary decision to approve the issuance of Authority to Construct (ATC) APP-26-00028 to The Wine Group, Inc. dba Golden State Vintners (facility) for the installation of a new three-staged natural gas boiler with a combined heat input rating of 6 million British thermal units per hour (MMBtu/hr). The new equipment will be installed at their Soledad winery at 1777 Metz Road in Soledad.

MBARD Rule 207, *Review or New of Modified Sources (NSR)* shall apply to all new stationary sources and all modifications to existing stationary sources which, after construction or modification, emit or have the potential to emit any affected pollutants. The proposed project will result in emissions increase and the project is subject to the requirements of Rule 207.

The facility-wide volatile organic compound (VOC) emissions are greater than or equal to the Offset threshold limits listed for Sections 4.2 and 5.3. As demonstrated in the MBARD's Evaluation Report, the new boiler installation project meets the requirements of Part 4 and Part 5 of Rule 207. Hence, MBARD's preliminary decision to approve the projects is being proposed because the facility has the capability of complying with all applicable MBARD rules and regulations.

The facility's application and MBARD's Evaluation Report are available for public inspection at MBARD's office at 24580 Silver Cloud Court, Monterey, CA. A copy of the evaluation report can be found on MBARD's website at www.mbard.org.

The public has an opportunity to review and comment on the proposed project. Under special circumstances, MBARD may hold a public hearing. Written comments must be submitted to the address below and be postmarked by Friday, May 29, 2026.

AVISO DECISIÓN PRELIMINAR DE LA PARTE 4 Y LA PARTE 5, *COMPENSACIONES*, DE LA REGLA DE
DISTRITO 207,
REVISIÓN DE FUENTES NUEVAS O MODIFICADAS (NSR)

De conformidad con la Regla 207, Sección 6.9 del Distrito de Recursos del Aire de la Bahía de Monterey (MBARD), se solicitan comentarios por escrito sobre la decisión preliminar de aprobar la emisión de la Autorización de Construcción (ATC) APP-26-00028 a The Wine Group, Inc. dba Golden State Vintners (instalación) para instalar una nueva caldera de gas natural de tres etapas con una potencia calorífica combinada de 6 millones de unidades térmicas británicas por hora (MMBtu/hr). El nuevo equipo se instalará en su bodega Soledad, ubicada en 1777 Metz Road, Soledad.

La Regla 207 del MBARD, *Revisión de Fuentes Nuevas Modificadas (NSR)*, se aplicará a todas las fuentes estacionarias nuevas y a todas las modificaciones de fuentes estacionarias existentes que, tras su construcción o modificación, emitan o tengan el potencial de emitir contaminantes. El proyecto propuesto generará un aumento de las emisiones y, por lo tanto, está sujeto a los requisitos de la Regla 207.

Las emisiones de compuestos orgánicos volátiles (VOC) de toda la instalación superan o igualan los límites de compensación establecidos en las secciones 4.2 y 5.3. Tal como se demuestra en el Informe de Evaluación de MBARD, el nuevo proyecto de instalación de calderas cumple con los requisitos de las partes 4 y 5 de la Regla 207. Por lo tanto, se propone la decisión preliminar de MBARD de aprobar los proyectos, dado que la instalación y tiene la capacidad de cumplir con todas las normas y reglamentos aplicables de MBARD.

La solicitud de la instalación y el informe de evaluación de MBARD están disponibles para consulta pública en la oficina de MBARD, ubicada en 24580 Silver Cloud Court, Monterey, CA. Una copia del informe de evaluación se puede encontrar en el sitio web de MBARD: www.mbard.org.

El público tiene la oportunidad de revisar y comentar el proyecto propuesto. En circunstancias especiales, MBARD podrá celebrar una audiencia pública. Los comentarios por escrito deberán enviarse a la dirección que figura a continuación y tener matasellos a más tardar el viernes 29 de mayo de 2026.

PROPOSAL:

The Wine Group, Inc. dba Golden State Vintners (applicant or facility) has submitted a permit application for the installation of a new three staged natural gas hydronic heater at their facility located at 1777 Metz Road in Soledad. The staged natural gas heater consists of three Dynaflame Condensing Hydronic Heating boiler, each with a rating of 2.0 million British thermal units per hour (MMBtu/hr).

The facility has noted the new equipment will be operated seasonally during the harvest period, which occurs mid-August through the end of October. The projected run time will be 60% during Quarter 3 (August-September) and 40% during Quarter 4 (October).

APPLICABLE RULES:

- Rule 200: Permits Required
- Rule 201: Sources Not Requiring Permits
- Rule 207: Review of New and Modified Stationary Sources
- Rule 218: Title V Operating Permits
- Rule 221: Federal Prevention of Significant Deterioration
- Rule 222: Federal Minor New Source Review

- Rule 402: Nuisance
- Rule 403: Particulate Matter
- Rule 404: Sulfur Compounds & Nitrogen Oxides
- Rule 412: Sulfur Content of Fuels
- Rule 413: Removal of Sulfur Compounds
- Rule 436: Title V: General Prohibitory Rule
- Rule 440: Mineral Processing Facilities
- Rule 1000: Toxic Air Contaminants
- CA Health & Safety Code, Section 42301.6 – Public Notice
- 40 CFR Part 60, Subpart Dc, Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units
- 40 CFR Part 63, Subpart DDDDD, National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters

EQUIPMENT DESCRIPTION:

THREE-STAGED NATURAL GAS HYDRONIC HEATING BOILER (6.0 MMBTU/hr):

Installation Of Three-Stage Natural Gas Hydronic Heater With A Total Of Three Modules Operated In Stages As Follows:

Module #1:

Camus Dynaflame Hydronic Heating Boiler, Model DFNH-20002MH, Serial Number TBD, With A Heat Input Rating Of 2.0 MMBtu/Hr.

Module #2:

Camus Dynaflame Hydronic Heating Boiler, Model DFNH-20002MH, Serial Number TBD, With A Heat Input Rating Of 2.0 MMBtu/Hr.

Module #3:

Camus Dynaflame Hydronic Heating Boiler, Model DFNH-20002MH, Serial Number TBD, With A Heat Input Rating Of 2.0 MMBtu/Hr.

EMISSIONS CALCULATIONS:

The boiler supplemental information for the three-staged Camus Dynaflame hydronic heater boilers is listed in Table 1. The application has proposed an operating schedule of 24 hours per day (hr/day), 7 days per week (day/week), and 8 weeks per year (week/yr).

Table 1. Camus Dynaflame DFNH-20002MH supplemental information.

Individual burner capacity (MMBtu/hr)	2.0
Total number of burners	3
Total burner capacity (MMBtu/hr)	6.0
Daily heat input capacity (MMBtu/day)	144
Daily heat input capacity (therm/day)	1,440
Annual heat input capacity (therm/yr)	80,640
Natural gas heating value ¹ (Btu/ft ³)	1,020
Daily natural gas fuel usage ² (MMft ³ /day)	0.141176
Annual natural gas fuel usage (MMBtu/yr)	8,064
Annual natural gas fuel usage (MMft ³ /yr)	7.905856
Total volumetric flow rate (cfm)	500 CFM @ 300°F (per burner)
Exhaust stack height above ground (feet)	6
Exhaust stack inner diameter (inches)	8

¹ Per EPA AP-42, Chapter 1.4, Natural Gas Combustion, the average gross heating value is approximately 1,020 MMBtu/MMft³.
² Per permit application, proposed schedule of 24 hours per day (hr/day), 7 days per week (day/week), and 8 weeks per year (week/yr). Daily fuel use: (6 MMBtu/hr) (24 hr/day) (MMft³/1,020 MMBtu) = 0.141176 ft³/day. Annual fuel use: (0.141176 ft³/day) (7 day/week) (8 week/yr) = 7.905856 MMft³/yr.

New Proposed (Post-Project) Potential to Emit (PTE) Emissions

The permit application noted that the Camus Dynaflame DFNH-20002 boiler can meet NO_x emissions of 9 ppm corrected to 3% O₂. The CO emissions will be based on emissions of 100 ppm corrected to 3% O₂. The VOC, PM, SO_x, and TOC emission factors are referenced from EPA AP-42 Table 1.4-1 & 1.4-2. Values in lb/MMft³. Table 2 shows the emission factors for the proposed three-staged boiler.

Table 2. Camus Dynaflame DFNH-20002 boiler emission factors.

Pollutant	Emission Factor (lb/MMft ³)
NO _x ¹	11.118
VOC ²	5.5
CO ¹	75.48
SO _x ²	0.6
PM=PM ₁₀ =PM _{2.5} ^{2,3}	7.6
TOC ²	11

¹ The NO_x emissions based on the best available control technology (BACT) emissions limit of 9 ppm corrected to 3% O₂ for NO_x. For CO, emissions based on 100 ppm corrected to 3% O₂. Emission factor estimated as follows:

$$\frac{lb}{MMBtu} = \frac{ppm}{10^6} \times \frac{lbmole}{\text{Molar volume, ft}^3} \times \frac{\text{Molecular weight, lb}}{lbmole} \times \frac{\text{Fuel factor } F_d, \text{ft}^3}{MMBtu} \times \frac{20.9}{(20.9 - O_2\%)} \times \frac{1,020 \text{ MMBtu}}{MMft^3}$$

Where:

$$\text{molar volume} = \frac{385 \text{ ft}^3}{lbmole}; \text{ at 1 atm and } 68^\circ\text{F}$$

$$\text{Molecular weight} = \frac{46.01 \text{ lb}}{lbmole} \text{ for } NO_x \text{ and } \frac{28.01 \text{ lb}}{lbmole} \text{ for } CO$$

$$\text{Fuel factor } F_d = \frac{8,710 \text{ ft}^3}{MMBtu} \text{ for natural gas}$$

O_2 concentration = 3%; emission factors corrected to 3% O_2

$$\frac{lb \text{ } NO_x}{MMBtu} = \frac{9}{10^6} \times \frac{lbmole}{385 \text{ ft}^3} \times \frac{46.01 \text{ lb}}{lbmole} \times \frac{8,710 \text{ ft}^3}{MMBtu} \times \frac{20.9}{(20.9 - 3)} \times \frac{1,020 \text{ MMBtu}}{MMft^3} = \frac{11.118 \text{ lb}}{MMBtu}$$

$$\frac{lb \text{ } CO}{MMBtu} = \frac{100}{10^6} \times \frac{lbmole}{385 \text{ ft}^3} \times \frac{28 \text{ lb}}{lbmole} \times \frac{8,710 \text{ ft}^3}{MMBtu} \times \frac{20.9}{(20.9 - 3)} \times \frac{1,020 \text{ MMBtu}}{MMft^3} = \frac{75.48 \text{ lb}}{MMBtu}$$

² The VOC, PM, SO_x , and TOC emission factors are referenced from EPA AP-42 Table 1.4-1 & 1.4-2. Values in lb/MMft³.

³ Per CARB's CEIDARS particulate matter size profile database (6/2022), for external combustion boilers, PM = PM₁₀ = PM_{2.5}.

The potential emissions from the new three-staged boiler are shown in Table 3.

Table 3. Camus Dynaflame three-staged boiler potential to emit emissions.

Pollutant:	Boiler heat input rate (MMft ³ /day)	Emission factor (lb/MM ft ³)	Daily emissions (lb/day)	Annual emissions ¹ (lb/yr)
NO _x	0.141176	11.118	1.57	87.92
VOC	0.141176	5.5	0.78	43.68
CO	0.141176	75.48	10.66	596.96
SO _x	0.141176	0.6	0.08	4.48
PM=PM ₁₀ =PM _{2.5} ²	0.141176	7.6	1.07	59.92
TOC	0.141176	11	1.55	86.80

¹ Annual emissions based upon proposed operating schedule of 24 hr/day, 7 day/week and 8 week/yr.

² Per CARB's CEIDARS particulate matter size profile database (6/2022), for external combustion boilers, PM = PM₁₀ = PM_{2.5}.

Table 4 and Table 5 show the new post-project potential emissions broken down by quarter in pounds per quarter (lbs/qtr) and in tons per quarter (ton/qtr) respectively. The emissions are based on the proposed seasonal use of the three-stage boiler heater of 60% in Quarter 3 and 40% in Quarter 4.

Table 4. Post-project Camus Dynaflame three-staged boiler PTE emissions in lbs/qtr.

Pollutant	Quarter 1 (lbs/qtr)	Quarter 2 (lbs/qtr)	Quarter 3 (lbs/qtr)	Quarter 4 (lbs/qtr)
NO _x			52.75	35.17
VOC			26.21	17.47
CO			358.18	238.78
SO _x			2.69	1.79
PM=PM ₁₀ =PM _{2.5}			35.95	23.97
TOC			52.08	34.72

Example: Quarter 3 NO_x = (87.92 lb NO_x/yr) (0.60) = 52.75 lb NO_x/qtr.

Table 5. Post-project Camus Dynaflame three-staged boiler PTE emissions in ton/qtr.

Pollutant	Quarter 1 (ton/qtr)	Quarter 2 (ton/qtr)	Quarter 3 (ton/qtr)	Quarter 4 (ton/qtr)	Annual (ton/yr)
NO _x			0.026	0.018	0.044
VOC			0.013	0.009	0.022
CO			0.179	0.119	0.298
SO _x			0.001	0.001	0.002
PM=PM ₁₀ =PM _{2.5} ¹			0.018	0.012	0.030
TOC			0.026	0.017	0.043

¹ Per CARB’s CEIDARS particulate matter size profile database (6/2022), for external combustion boilers, PM = PM₁₀ = PM_{2.5}.

RULE COMPLIANCE:

The following Monterey Bay Air Resources District (MBARD) rules apply to the operation as specified:

Rule 200 – Permits Required

The purpose of this Rule is to identify when MBARD permits are issued. The provisions of this Rule shall apply to any person who builds, erects, alters, or replaces any article, machine, equipment or other contrivance which may cause the issuance of air contaminants or the use of which may eliminate or reduce or control the issuance of air contaminants.

Pursuant to Section 3.1, person shall build, erect, alter, or replace any article, machine, equipment or other contrivance which may cause the issuance of air contaminants or the use of which may eliminate or reduce or control the issuance of air contaminants unless the facility owner or operator has obtained a separate written Authority to Construct for each permit unit from the Air Pollution Control Officer. An Authority to Construct shall remain in effect until the Permit to Operate the equipment for which the application was filed is granted or denied or the application is cancelled. Exceptions to MBARD Rule 200 are identified in MBARD Rule 201.

Rule 201 – Sources Not Requiring Permits

The purpose of this Rule is to provide a list of source and equipment categories which are exempt from the requirements of Rule 200 *Permits Required* to obtain an ATC or Permit to Operate (PTO).

Pursuant to Section 4.8.1.1, any steam generator, steam superheater, water boiler, or closed heat transfer system at a stationary source that has an aggregated heat input rate less than 2 MMBtu/hr when fired with natural gas or liquified petroleum gas or any combination thereof is not subject to permitting. The proposed three-staged natural gas boiler has a combined heat input rating of 6.0 MMBtu/hr and is subject to permitting.

Rule 207 – Review of New or Modified Sources (as adopted on 4/20/11)

This Rule provides for the review of new and modified stationary air pollution sources to meet requirements for the review of new and modified stationary sources (NSR) and for the Prevention of Significant Deterioration (PSD), under the provisions of the federal Clean Air Act; and requirements for NSR under the provisions of the California Clean Air Act. The intent of this Rule is to ensure that the most stringent requirements of these programs shall be applied.

This Rule shall apply to all new stationary sources and all modifications to existing stationary sources which, after construction or modification, emit or have the potential to emit any affected pollutants. The proposed project is subject to the requirements of this Rule.

Federal Best Available Control Technology (BACT) Analysis:

Pursuant to Section 4.1.1, an applicant shall apply BACT to a new stationary source or modification of an existing source, which has the potential to emit greater than or equal to any one of the affected pollutant levels listed in Table 4.1.1 or a modification of an existing stationary source which has the potential to result in a new emissions increase, as defined in Section 2.37, occurring after October 20, 2010 for PM_{2.5} or after August 19, 1983 for PM₁₀ or after July 15, 1976 for any other affected pollutant.

Table 6 shows the controlled emissions from the proposed project, the facility-wide new emissions and the Federal BACT thresholds of Table 4.1.1.

Table 6. New Emission Increases – Federal BACT Analysis

Application no./Equipment Description/Installation Date:	NO _x (lb/day)	VOC (lb/day)	CO (lb/day)	SO _x (lb/day)	PM ¹ (lb/day)	PM ₁₀ (lb/day)	PM _{2.5} (lb/day)
GNR-0017628 Oak barrel storage & aging (2017)		104.84					
GNR-0017630 Wastewater treatment plant (2017)		11.67					
PTO-25-00004 Wine fermentation & storage (2017)		241.28					
APP-26-00028 Three-staged nat gas boiler - 6 MMBtu/hr (2026)	1.57	0.78	10.66	0.08	1.07	1.07	1.07
Total	1.57	358.57	10.66	0.08	1.07	1.07	1.07
Table 4.1.1 Federal BACT Threshold:	150	150	550	150	150	82	54.79

¹ PM₁₀ and PM_{2.5} fractions estimated using CARB’s CEIDARS particulate matter size profile database (updated 6/9/23). For IC engine-diesel (profile #116): PM₁₀ = 0.96 PM & PM_{2.5} = 0.937 PM]. For IC engine-gas (profile #123): PM₁₀ = 0.994 PM & PM_{2.5} = 0.992 PM. For gas-fired boilers (profile #1101): PM = PM₁₀ = PM_{2.5}.

² Includes only PM_{2.5} emission occurring after October 20, 2010, and PM₁₀ emissions occurring after August 19, 1983.

³ Equipment predates the NSR applicability date of July 15, 1976.

⁴ Fermentation operations have been conducted at this facility prior to July 15, 1976. Therefore, the emission increases in this table only reflect increases in fermentation operation after July 15, 1976. Documentation of these emission increases are reported in applications 12761, 14950, and 15509, and summarized in application GNR-017710. Application GNR-017710 was required to update the facility emissions using the more current CARB emission factors from the EPA AP-42 emission factors.

Table 6 shows that the new emissions, as defined in Section 2.37, exceed the BACT thresholds of Section 4.1.1 for VOCs. Per MBARD’s *Clarification of Permit Requirements for Gaseous Fired Boilers*, the BACT requirements for gaseous-fired boilers rated at 2.0 MMBtu/hr are shown in Table 7. Per the permit application, the proposed Camus Dynaflame DFNH-20002MH boiler will meet NO_x emissions of 9 ppm and will have CO emissions of lower than 100 ppm, which will meet the BACT standards.

Table 7. Boiler BACT Requirements for units rated <2.0 MMBtu/hr.

Pollutant	BACT limit (ppm corrected to 3% O ₂)	Camus Dynaflame emissions (ppm corrected to 3% O ₂)
NO _x	≤ 20	≤ 9
CO	≤ 400	≤ 100

Permit conditions will be included requiring the unit meet the BACT emission standards.

California BACT analysis

Pursuant to Section 5.2, BACT shall be required for any new or modified permit unit with a potential to emit 25 pounds per day or more of VOCs or NO_x. Table 8 shows that the proposed project’s emissions do not trigger the CA BACT thresholds.

Table 8. California BACT determination.

Pollutant	BACT threshold (lb/day)	Project uncontrolled emissions (lb/day)	BACT triggered?
NO _x	25	1.57	No
VOC ¹	25	0.78	No

¹ Project emissions from Table 3.

Federal Offsets analysis

Pursuant to Section 4.2, Offsets are required for any new or modified source, which has net emissions increases equal to exceeding thresholds specified in Rule 207, Table 4.2.2. The application for the boiler replacement was received in October 2022. Hence, as defined by Section 2.38, this operation is a new source from a federal standpoint, with commencement after July 15, 1976. Accordingly, the project emissions must be counted in the net and new emission increase calculation.

Table 9 shows the emissions from the new project, the net emissions increase for the facility and the Federal offset thresholds.

Table 9. Federal Net Emissions Increase (NEI) – Offset Determination.

Application no./Equipment Description/Installation Date:	NO _x (lb/day)	VOC (lb/day)	CO (lb/day)	SO _x (lb/day)	PM (lb/day)	PM ₁₀ (lb/day)
GNR-0017628 Oak barrel storage & aging (2017)		104.84				
GNR-0017630 Wastewater treatment plant (2017)		11.67				
PTO-25-00004 Wine fermentation & storage (2017)		241.28				
APP-26-00028 Three-staged nat gas boiler - 6 MMBtu/hr (2026)	1.57	0.78	10.66	0.08	1.07	1.07
Total	1.57	358.57	10.66	0.08	1.07	1.07
Table 4.2.2 Offset Threshold:	150	150	550	150	150	82

Table 9 shows that the facility exceeds the VOC Federal offset threshold of Section 4.2. No other pollutant exceeds their respective threshold levels. Accordingly, the facility is subject to the offset requirements of Section 4.

Pursuant to Section 4.2.5, the amount of offsets obtained shall be at least equal to the net emissions increase from the proposed new source or modification. Since the proposed natural gas three-staged boiler is a new source, the VOC offsets needed are the potential emissions from the new boiler. Table 10 shows the VOC emissions profile for the proposed project, PTE_{post-project}.

Table 10. Federal offset determination PTE_{post-project} for VOCs.

Federal Quarterly Profiles	Quarter 1 (tons/qtr)	Quarter 2 (tons/qtr)	Quarter 3 (tons/qtr)	Quarter 4 (tons/qtr)
APP-26-00028 Three-staged boiler – 6 MMBtu/hr ¹			0.013	0.009
Total			0.013	0.009

¹ The project PTE emissions are shown in Table 4 in pounds per quarter and in Table 5 in tons per quarter.

Table 10 shows that the VOC emission increases from the proposed modification results in an increase of 0.013 tons for quarter 3, and 0.009 tons for quarter 4. The quarterly VOC emission increases must be offset by emission reductions. MBARD’s Policy for Rounding, dated April 18, 2017, for determining the amount of offsets required in accordance with MBARD Rule 207 is to round up to the tenths place and to the nearest whole number. For example, the given number of decimal places is 0 so a quarterly offset amount of 0.013 tons rounds to 0. Thus, for this project, no offsets are required.

Under application 16273 & GNR-017386, the facility increased the fermentation of the facility and surrendered emission reduction credits to offset the emission increases. As part of the permitting process, MBARD established a VOC annual emission limit of **44.8 tons per year** for all permitted sources subject to offset requirements as of January 2017. This VOC annual emission limit included the potential-to-emit (PTE) emissions from the following permits:

- PTO 12300 Ajax hot water boiler rated at 4.5 MMBtu/hr
- PTO GNR-00117628 Oak barrel storage & aging
- PTO GNR-0017630 Wastewater treatment plant
- PTO-25-00004 Wine fermentation & storage

The permit for the Ajax hot water boiler, PTO 12300, was cancelled in April 2019. Since PTO 12300 was cancelled, the VOC annual emission limit of 44.8 tons per year will need to be updated for the rest of the permits.

California Offsets analysis

Pursuant to Section 5.3, any new or modified stationary source with a potential to emit 137 pounds per day or more of VOCs or NO_x shall be required to provide offsets at the ratios specified in Section 4.3. Pursuant to Section 2.38, for the purposes of Part 5 of this Rule, the new source applicability date shall be April 21, 1993. Table 11 shows the facility-wide PTE emissions and the CA offset thresholds of Section 5.3.

Table 11. Facility-wide potential to emit emissions and CA offset determination.

Permit/Application #	Equipment description (installation date)	NO _x (lb/day)	VOC (lb/day)
GNR-0017628	Oak barrel storage & aging (2017)		104.84
GNR-0017628	Wastewater treatment plant (2017)		11.67
PTO-25-00004	Wine fermentation & storage (2017)		241.28

Permit/Application #	Equipment description (installation date)	NO _x (lb/day)	VOC (lb/day)
APP-26-00028	Three-staged natural gas boiler - 6 MMBtu/hr (2026)	1.57	0.78
	Total	1.57	358.57

Table 11 shows that the facility-wide PTE emissions exceed the VOC offset threshold of 137 pounds per day of Section 5.3.

Pursuant to Section 5.3.4, the amount of offsets obtained shall be at least equal to the difference between the emissions of the modified source, and the emissions of the existing source. Since the proposed natural gas three-staged boiler is a new source, the VOC offsets needed are the potential emissions from the new boiler. As noted in Table 10, the quarterly offset amounts round to 0.

Visibility, soils, and vegetation analysis:

Section 3.2 requires the applicant to provide MBARD with an analysis of impairment to visibility, soils and vegetation. MBARD does not find it necessary to determine the negligible effect emissions from this modification will have on visibility, soils and vegetation.

Ambient air quality standards (AAQS) and emission increments:

Section 3.3, Ambient Air Quality Standards and Emission Increments, prohibits emissions from causing or contributing to a violation of an ambient air quality standard or exceeding any air quality increment. Moreover, Section 6.6, Air Quality Increment Analysis, prohibits a source which is subject to Section 4.2, Offset Requirements, from exceeding 50% of the remaining emissions increment.

The proposed boilers have the potential to emit NO_x, VOC, CO, SO_x, PM₁₀, and PM_{2.5}. The proposed units do not emit H₂S, lead, sulfates, or vinyl chloride.

Ozone (O₃), a component of smog, is formed in the atmosphere rather than being directly emitted from pollutant sources. O₃ forms as a result of VOCs and NO_x reacting in the presence of sunlight in the atmosphere. VOCs and NO_x are termed “O₃ precursors” and their emissions are regulated in order to control the creation of O₃. O₃ is a regional pollutant and ambient concentration can only be predicted using regional photochemical models that account for all sources of precursors, which is beyond the scope of this analysis. Therefore, no photochemical O₃ modeling was conducted. However, on February 25, 2021, the California Air Resources Board (CARB) approved the proposed updates to the State Area Designation based on 2017 to 2019 air quality data which designates MBARD as attainment for O₃.

MBARD used the Lakes Environmental AERMOD dispersion model to get the maximum concentration for the three-staged boiler. The applicant noted that each boiler will have its own exhaust stack. Table 12 shows the source pathway inputs used in the AERMOD model for the three-staged boiler.

Table 12. AERMOD Source Pathway inputs.

Source ID ¹	1	2	3
Source Type ²	Point	Point	Point
X-Coordinate	651623	651624	651625
Y-Coordinate	4032636	4032636	4032636
Release type	Capped	Capped	Capped
Release height	6 feet	6 feet	6 feet

Base elevation ³	246.06 feet	246.06 feet	246.06 feet
Emissions rate	1 lb/hr	1 lb/hr	1 lb/hr
Stack diameter	8 inches	8 inches	8 inches
Stack release type	Vertical, capped	Vertical, capped	Vertical, capped
Gas exit temperature ⁴	300 °F	300 °F	300 °F
Gas exit flow rate ⁴	500 cfm	500 cfm	500 cfm
Weather station elevation ⁵	22.6 meters	22.6 meters	22.6 meters

¹ Source ID 1, 2 & 3, used for Boiler modules 1, 2 & 3, respectively.

² Point source type used since each boiler module has a dedicated stack.

³ Base elevation was uploaded automatically when running AERMAP on AERMOD.

⁴ Per permit application supplemental form.

⁵ Elevation for the Salinas Municipal Airport: <https://ww2.arb.ca.gov/resources/documents/harp-aermod-meteorological-files>.

Table 13 shows the maximum concentrations from the AERMOD dispersion model. The AERMOD model summary file is included in Attachment 1.

Table 13. Air Dispersion Modeling (AERMOD) Maximum Concentrations.

Averaging Period	Module 1 - Max Concentration (µg/m ³ / lb/hr)	Module 2 - Max Concentration (µg/m ³ / lb/hr)	Module 3 - Max Concentration (µg/m ³ / lb/hr)
1-hr	236.36	237.19	240.30
3-hr	163.90	174.29	171.79
8-hr	96.03	94.28	91.66
24-hr	38.55	35.99	36.36
Annual	5.76	5.52	5.41

Table 14 shows the PTE emissions increases from each boiler module for the proposed project.

Table 14. PTE emissions increase. Emissions broken down by boiler module.

Pollutant	PTE emissions per boiler module (lb/day) ¹	PTE emissions per boiler module (lb/hr)
NO _x	0.523	0.022
CO	3.552	0.148
SO _x	0.028	0.001
PM	0.358	0.015

¹ Project PTE emissions are shown in Table 3 in pounds per day for all three modules.

Table 15 shows the effect of the project’s emissions increases, as determined in Table 14, on the Ambient Air quality Standards. The background concentration was retrieved from EPA’s Monitor Values Report page: <https://www.epa.gov/outdoor-air-quality-data/monitor-values-report> and CARB’s iADAM Air Quality Data Page: <https://www.arb.ca.gov/adam/>.

Table 15. Source effect on ambient Air Quality Standards.

Pollutant	Averaging period	Source conc. ¹ (µg/m ³)	Background conc. ² (µg/m ³)	Total conc. (µg/m ³)	State standard (µg/m ³)	Federal standard (µg/m ³)	Total exceeds standard?
Nitrogen Dioxide ³ (NO ₂)	1-hr	15.70	54.6	70.30	339	188	No
	Annual	0.37	5.7	6.07	57	100	No

Pollutant	Averaging period	Source conc. ¹ (µg/m ³)	Background conc. ² (µg/m ³)	Total conc. (µg/m ³)	State standard (µg/m ³)	Federal standard (µg/m ³)	Total exceeds standard?
Carbon Monoxide (CO)	1-hr	105.65	1,946.8	2,052.45	23,000	40,000	No
	8-hr	41.73	687.1	728.83	10,000	10,000	No
Sulfur Dioxide ⁴ (SO ₂)	1-hr	0.71	Not available	0.71	655	196	No
	3-hr	0.51	Not available	0.51	None	1,300	No
	24-hr	0.11	Not available	0.11	105	None	No
PM ₁₀	24-hr	1.66	79	80.66	50	150	Yes, State
	Annual	0.25	23.5	23.75	20	None	Yes, State
PM _{2.5}	24-hr	1.66	15	16.66	None	35	No
	Annual	0.25	5.3	5.55	12	12	No

¹ Source concentration = maximum concentration for each averaging period from AERMOD model run from both exhaust stacks multiplied by the emissions increase in g/s.

Example for the 1-hr period: $NO_x = [(236.36 \mu\text{g}/\text{m}^3/1 \text{ lb/hr}) * (0.022 \text{ lb/hr})] + [(237.19 \mu\text{g}/\text{m}^3/1 \text{ lb/hr}) * (0.022 \text{ lb/hr})] + [(240.30 \mu\text{g}/\text{m}^3/1 \text{ lb/hr}) * (0.022 \text{ lb/hr})] = 15.70 \mu\text{g}/\text{m}^3$

² Background concentration were retrieved from EPA’s Monitor Values Report page: <https://www.epa.gov/outdoor-air-quality-data/monitor-values-report> and CARB’s iADAM Air Quality Data Page: <https://www.arb.ca.gov/adam/>.

³ Conservatively assume all NO_x emissions equal to NO₂.

⁴ Conservatively assume all SO_x emissions equal to SO₂.

As shown in Table 15, the PM₁₀ background concentration exceed the state Air Quality Standard. MBARD is currently in nonattainment status for PM₁₀ on both an annual and 24-hour basis for the State. Because the background concentrations for annual PM₁₀ and 24-hour are above the AAQS, all projects emitting PM₁₀ will result in a PM₁₀ concentration exceedance of an AAQS. MBARD has determined that projects will not contribute significantly to an exceedance of the AAQS if the project’s contribution is less than 50% of the remaining emissions increment as stipulated in Section 2.5 *Air Quality Increment* of MBARD Rule 207.

Table 16 shows the allowable increment listed in MBARD Rule 207, Section 2.5, Table 2.5.5 and the proposed project’s concentration. The table shows that the proposed project is below 50% of the allowable increment in Monterey County. The source concentrations shown in Table 16 are based on the AERMOD modeled max concentrations shown in Table 13 and three-staged boiler PTE emissions shown in Table 3.

Table 16. Proposed project effect on the increment.

Pollutant	Averaging Period	Source Conc. (µg/m ³)	Allowable Increment in Monterey County ¹ (µg/m ³)	50% of Allowable Increment in Monterey County ¹ (µg/m ³)	50% of Allowable Increment Exceeded ²
Nitrogen Dioxide (NO ₂)	Annual	0.37	25	12.50	No
Carbon Monoxide (CO)	1-hr	105.65	12,000	6,000	No
Sulfur Dioxide (SO ₂)	3-hr	0.51	512	256	No
	24-hr	0.11	91	45.5	No
	Annual	0.02	20	10	No

Pollutant	Averaging Period	Source Conc. (µg/m ³)	Allowable Increment in Monterey County ¹ (µg/m ³)	50% of Allowable Increment in Monterey County ¹ (µg/m ³)	50% of Allowable Increment Exceeded ²
PM ₁₀	24-hr	1.66	21.1	10.55	No
	Annual	0.25	10.8	5.40	No
PM _{2.5}	24-hr	1.66	9	4.50	No
	Annual	0.034	4	2.00	No

¹ MBARD Rule 207, Table 2.5.2, Area E, Monterey County other than Areas A, C, & F Impact Zones

² As stated in Section 6.6 of Rule 207 “the District shall not grant a permit to a source which is subject to Section 4.2 herein if its emissions will exceed 50 percent of the remaining emissions increment.”

Publication and Public Comment

MBARD is required, pursuant to Section 6.9, to publish in at least one newspaper of general circulation in MBARD’s jurisdiction a notice stating the preliminary decision on a source’s application for a modification where the offset thresholds of Section 4.2 or 5.3 are exceeded. MBARD will comply with the requirements of Section 6.9 and issue the public notice in a local newspaper and will post the public notice on MBARD’s webpage. The public notice will invite written public comment for a 30-day period following the date of publication.

Rule 207 – Review of New or Modified Sources (as adopted on 2/15/2017)

Note that MBARD has not received approval for the 2/15/2017 version of Rule 207 and MBARD is implementing Rule 207 as adopted on 4/20/2011. For informational purposes only, the Rule applicability of Rule 207 as adopted on 2/15/2017 is as follows:

The purpose of this Rule is to provide for the review of new and modified stationary air pollution sources to meet the New Source Review requirements under the provisions of the California Clean Air Act. This Rule provides mechanisms by which Authorities to Construct may be granted to such sources without interfering with the attainment or maintenance of California ambient air quality standards. Each project subject to New Source Review shall undergo a review under the federal requirements contained within Rule 220 and Rule 221, and a parallel review under the requirements of this Rule and the most stringent applicable provisions shall apply.

Rule 207 applies to all new stationary sources and all modifications to existing stationary sources, which after construction or modification, emit or have the potential to emit any affected pollutants. This project is subject to the requirements of this Rule.

BACT requirements

Pursuant to Section 4.1.1, BACT shall be required for any new or modified permit unit with a potential to emit 25 pounds per day or more of VOCs or NO_x. As shown in Table 8, the proposed project emissions do not have exceed the NO_x and VOCs threshold of 25 pounds per day.

Pursuant to Section 4.1.2, BACT shall be required for a new or modified stationary source which has the potential to emit greater than or equal to any one of the affected pollutant levels listed in Table 4.1.1.

Table 17 shows the emissions from the new project, the facility-wide emissions and the BACT thresholds of Section 4.1.2, Table 4.1.1.

Table 17. Facility-wide Potential to Emit Emissions.

Application no./Equipment Description/Installation Date:	NO _x (lb/day)	VOC (lb/day)	CO (lb/day)	SO _x (lb/day)	PM (lb/day)	PM ₁₀ (lb/day)	PM _{2.5} (lb/day)
GNR-0017628 Oak barrel storage & aging (2017)		104.84					
GNR-0017630 Wastewater treatment plant (2017)		11.67					
PTO-25-00004 Wine fermentation & storage (2017)		241.28					
APP-26-00028 Three-staged nat gas boiler - 6 MMBtu/hr (2026)	1.57	0.78	10.66	0.08	1.07	1.07	1.07
Total	1.57	358.57	10.66	0.08	1.07	1.07	1.07
Table 4.1.1 Federal BACT Threshold:	150	150	550	150	150	82	54.79

Table 17 shows that the new emissions, as defined in Section 2.37, exceed the BACT thresholds of Section 4.1.1 for VOC. Table 7 above shows the BACT requirements from MBARD’s *Clarification of Permit Requirements for Gaseous Fired Boilers* and it shows the proposed three-staged boiler meets the requirements.

Offset requirements

Pursuant Section 4.2, Offsets are required for any new or modified source, which has the potential to emit equal to or greater than the thresholds specified in Rule 207, Table 4.2.1. Table 18 shows the facility wide PTE emissions and the offset thresholds specified in Section 4.2, Table 4.2.1.

Table 18. Facility-wide potential to emit and offset determination.

Application no./Equipment Description/Installation Date:	NO _x (lb/day)	VOC (lb/day)	CO (lb/day)	SO _x (lb/day)	PM (lb/day)	PM ₁₀ (lb/day)
GNR-0017628 Oak barrel storage & aging (2017)		104.84				
GNR-0017630 Wastewater treatment plant (2017)		11.67				
PTO-25-00004 Wine fermentation & storage (2017)		241.28				
APP-26-00028 Three-staged nat gas boiler - 6 MMBtu/hr (2026)	1.57	0.78	10.66	0.08	1.07	1.07
Total	1.57	358.57	10.66	0.08	1.07	1.07
Table 4.2.2 Offset Threshold:	150	150	550	150	150	82

Table 18 shows the facility exceeds the VOC offset threshold of Section 4.2, Table 4.2.1.

Pursuant to Section 4.2.3, offsets obtained shall be equal to the potential to emit increase from the proposed new source or modification. As noted in Table 10, the quarterly offset amounts round to 0 and the project is not subject to offset requirements.

As pointed out, the Rule as amended on 2/15/2017 has not been approved and the version as adopted on 4/20/2011 will be implemented.

Rule 218 – Title V: Federal Operating Permits

This is the implementing regulation by which MBARD issues the federal Operating Permits. Pursuant to the applicability Section 1.2, the provisions of the Rule apply to:

- Any facility that is a major source; or
- Any acid rain source, as defined by Title IV of the Act; or
- Any solid waste incinerator that must comply with Section 129(e) of the Act; or
- Any other stationary source or category of sources deemed to require a Federal Operating Permit (FOP) by the United States EPA.

Section 2.18.1 defines a major source as a stationary source or any group of stationary sources as defined above, that directly emits, or has the potential to emit, 100 tons per year or more of any air pollutant except greenhouse gases. The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purpose of Section 302(j) of the Act unless the source belongs to one of the stationary source categories listed in 40 CFR 70.2 “Definitions – Major Source (2)(i-xxvi).

Table 19 shows the facility PTE emissions, which shows the facility PTE emissions do not exceed the major source thresholds.

Table 19. Facility PTE emissions in tons per year.

Application no.:	NO _x (ton/yr)	VOC (ton/yr)	CO (ton/yr)	SO _x (ton/yr)	PM (ton/yr)
GNR-0017628 Oak barrel storage & aging (2017)		19.13			
GNR-0017630 Wastewater treatment plant (2017)		2.13			
PTO-25-00004 Wine fermentation & storage (2017)		23.44			
APP-26-00028 Three-staged nat gas boiler - 6 MMBtu/hr (2026)	0.04	0.02	0.30	0.00	0.03
Total	0.04	44.72	0.30	0.00	0.03

Rule 221 – Federal Prevention of Significant Deterioration

The federal Prevention of Significant Deterioration (PSD) program is a construction permitting program for new major stationary sources and major modifications to existing major stationary sources located in areas classified as attainment or in areas that are unclassifiable for any criteria air pollutant. This Rule provides for the review of new and modified major stationary sources to meet requirements for PSD, under the provisions of the federal Clean Air Act. The purpose of this Rule is to incorporate the federal PSD rule requirements into MBARD’s Rules and Regulations through incorporating the federal requirements by reference.

This Rule shall apply to any source and owner or operator of any source subject to any requirements under Title 40 Code of Federal Regulations, Part 52, Section 21 (40 CFR 52.21), as incorporated into this Rule. The proposed project does not meet the definition of a new major stationary source, or a major modification to an existing stationary source. Since the Prevention of Significant Deterioration (PSD) program only

applies to new major stationary sources, or major modifications to stationary sources, this project is not subject to MBARD Rule 221.

Rule 222 – Minor New Source Review

This Rule provides for the review of new and modified stationary air pollution sources to meet the requirements for the review of such sources, under the new source review (NSR) provisions of the federal Clean Air Act. This Rule provides mechanisms by which Authorities to Construct may be granted to such sources without interfering with the attainment or maintenance of ambient air quality standards.

This Rule shall apply to any new or modified stationary source that emits an air pollutant (or its precursors) subject to any National Ambient Air Quality Standard (NAAQS).

Compliance with the New Source Review (NSR) provisions of the California Clean Air Act, as defined in MBARD Rule 207, ensures compliance with MBARD Rule 222, Federal Minor NSR.

Rule 300 – District Fees

This Rule provides the mechanisms for assessing fees for the issuance and renewal of Permits to Operate, Authorities to Construct, and other actions in MBARD's permit system; and to recover MBARD costs for requested services, materials, or equipment. The fees prescribed within this Rule do not exceed the cost of issuing, maintaining, and performing inspection activities pertaining to all permits.

This Rule shall apply to all owners and operators of stationary sources which are required by MBARD Rule 200 *Permits Required* to obtain an Authority to Construct or Permit to Operate; and to requesters of MBARD services, materials, or equipment.

According to MBARD Fee Determination Protocol, affirmed by the Board on 6/16/04, and revised on 8/26/19, the billable emissions shall be based on the 75% of the potential to emit for equipment listed on the permit unless operation is restricted by permit conditions.

Table 20 shows the total emissions from the three-staged boiler. The facility is proposing an operating schedule of 24 hours per day, 7 days per week and 8 weeks per year for the three-staged natural gas boiler. Thus, the billable emissions are 0.41 tons per year with a corresponding fee code of 502 based on the proposed operating schedule.

Table 20. Billable emissions.

Pollutant	Yearly emissions ¹ (ton/yr)
NO _x	0.04
TOC	0.04
CO	0.30
SO _x	0.00
PM	0.03
PTE Total:	0.41

¹ Based on application's listed operating schedule of 24 hr/day, 7 day/week and 8 week/yr.

Rule 400 – Visible Emissions

The purpose of this Rule is to provide limits for the visible emissions from sources within MBARD. The provisions of this Rule shall apply to all sources of air pollutant emissions in MBARD.

According to MBARD Rule 400 Section 3.1, no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark or darker than Ringelmann 1, or equivalent 20% opacity. This requirement will be included as a permit condition.

Rule 402 – Nuisance

The purpose of this Rule is to provide an explicit prohibition against sources creating public nuisances while operating within MBARD. The provisions of this Rule shall apply to all sources of air pollutant emissions within the Air District.

According to MBARD Rule 402, Part 3, no person shall discharge from any source whatsoever such quantities of air contaminants or other materials which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; or which endanger the comfort, repose, health, or safety of any such persons or the public; or which cause, or have a natural tendency to cause, injury or damage to business or property. This requirement will be included as a permit condition.

MBARD Rule 403 – Particulate Matter

The purpose of this Rule is to provide particulate matter emission limits for sources operating within MBARD. The provisions of this Rule shall apply to any source discharging particulate matter while operating within the Air District.

Pursuant to Section 3.1, a person shall not discharge from any source whatsoever particulate matter in excess of 0.15 grains/ft³. Compliance is assured by the calculation below based on PM hourly emission rate of 0.0446 lb/hr [(1.07 lb/day) ÷ (24 hr/day) = 0.0446 lb/hr] and exhaust flow rate of 500 ft³/min.

$$PM \left(\frac{gr}{ft^3} \right) = \frac{PM, lb}{hr} \times \frac{7,000 gr}{lb} \times \frac{hr}{60 min} \div \frac{exhaust\ flow, ft^3}{min}$$
$$PM \left(\frac{gr}{ft^3} \right) = \frac{0.0446, lb}{hr} \times \frac{7,000 gr}{lb} \times \frac{hr}{60 min} \div \frac{500, ft^3}{min} = \frac{0.0104 gr}{ft^3}$$

MBARD Rule 404 – Sulfur Compounds & Nitrogen Oxides

The purpose of this Rule is to provide limits for the emissions of sulfur compounds, nitrogen oxides and nitrogen dioxide from sources within MBARD. The provisions of this Rule shall apply to sources of sulfur compounds, nitrogen oxides, and nitrogen dioxide subject to MBARD Rule 200 *Permits Required*.

Pursuant to Section 1.3.2, any source subject to an emission limit imposed by BACT requirements of Section 4.1 or 5.2 of MBARD Rule 207 *Review of New or Modified Sources* shall not be subject to Section 3.1 of Rule 404 for the same pollutant. Since the proposed three-staged natural gas boiler is subject to BACT for NO_x, the unit is not subject to Sections 3.1.2, 3.1.3 and 3.1.4, which set requirements for NO_x.

Section 3.1 prohibits any single emission unit from exceeding the following concentration or amount at the point of discharge to the atmosphere:

Compliance with the Section 3.1.1 emission limit for sulfur compounds calculated as sulfur dioxide (SO₂), 0.2% by volume (2,000 ppmv) for the three-staged boiler is assured based on the SO₂ emissions of 0.0025 lb/hr [(0.08 lb/day ÷ (24 hr/day) = 0.0033 lb/hr] and exhaust flow rate of 30,000 ft³/hr. See calculation

below:

$$SO_2(ppm) = \frac{lbSO_2}{hr} \div \left(\frac{DSCFM, ft^3}{hr} \times \frac{MV_{SO_2}, lb}{lbmole} \times \frac{lbmole}{385ft^3} \right) \times 10^6$$
$$SO_2(ppm) = \frac{0.0033 lb}{hr} \div \left(\frac{30,000 ft^3}{hr} \times \frac{64 lb}{lbmole} \times \frac{lbmole}{385ft^3} \right) \times 10^6 = 0.662 ppm$$

Rule 412 – Sulfur Content of Fuels

The purpose of this Rule is to limit emissions of sulfur oxides from combustion sources within MBARD. The provisions of this Rule shall apply to all combustion sources operated within the Air District unless exempted pursuant to Section 1.3 of this Rule.

Part 3 requires that no gaseous fuel be burned unless the sulfur content of the fuel is less than 50 grains per 100 cubic feet. The Public Utilities Commission of the State of California has issued General Order 58-A titled “Standards For Gas Service In The State Of California” (latest revision April 12, 1989). Title 7 (Purity of Gas of the General Order specifies hydrogen sulfide and total sulfur standards for any gas supplied by a utility. Section (a) limits hydrogen sulfide to 0.25 grains per 100 standard cubic feet. Accordingly, with the use of utility line natural gas, compliance is expected with this rule.

Rule 413 – Removal of Sulfur Compounds

The provisions of this Rule shall apply to all combustion sources operated within the Air District unless exempted pursuant to Section 1.3. Section 1.3 currently does not list any exemptions.

According to MBARD Rule 413 Part 3, the provisions of MBARD Rule 412 shall not apply where the sulfur compounds are removed pre or post combustion, or where a mixture of fuels is used, so that the resulting emission of sulfur compounds to the atmosphere is no greater than that which would be emitted by using a liquid or solid fuel complying with MBARD Rule 412. Since the fuel is expected to meet the provisions of MBARD Rule 412, the equipment is expected to meet the provisions of MBARD Rule 413.

Rule 436 – Title V: General Prohibitory Rule

The purpose of this Rule is to provide federally enforceable potential to emit limitations limiting emissions below the thresholds requiring federal Title V operating permits under Rule 218.

General Applicability: This Rule shall apply to any stationary source which would, if it did not comply with the limitations set forth in this rule, have the potential to emit air contaminants equal to or in excess of the threshold for a major source of regulated air pollutants or a major source of hazardous air pollutants (HAPs) and which meets one of the following conditions:

- Rule 436, Section 1.2.1: In every 12-month period, the actual emissions of the stationary source are less than or equal to the emission limitations specified in Section 3.1 (shown below); or
 - 50 percent of the major source thresholds for regulated air pollutants (excluding HAPs), or
 - 5 tons per year of a single HAP, or
 - 12.5 tons per year of any combination of HAPs, or
 - 50 percent of any lesser threshold for a single HAP as the U.S. EPA may establish by rule.
- Rule 436, Section 1.2.2: In every 12-month period, at least 90 percent of the emissions from the stationary source are associated with an operation limited by any one of the alternative operational

limits specified in Section 6.1.

As shown in Table 19, the facility-wide annual PTE emissions are below the applicability thresholds.

Rule 436 Section 1.3.2.1 allows an exemption from Title V Recordkeeping Requirements of Part 4 if actual emissions, based on annual renewal information sheets, will not exceed in every 12-month period the following quantities:

- 5 tons per year for regulated (criteria) pollutants;
- 2 tons per year of any sing HAP;
- 5 tons per year of any combination of HAPs per year, and
- 20% of any lesser threshold for a single HAP that the EPA may establish by rule.

As shown in Table 19, the facility exceeds the thresholds of Section 1.3.2.1. The permit will include recordkeeping requirements to meet the requirements of Rule 436.

Section 5.2 allows an exemption from Title V reporting requirements, if actual emissions, based on annual renewal information sheets, will not exceed in every 12-month period the following quantities:

- 25 tons per year for regulated (criteria) pollutants for which MBARD has federal area designation of attainment, unclassified, transitional or moderate nonattainment.
- 15 tons per year for regulated (criteria) pollutants for which MBARD has federal area designation of serious nonattainment.
- 6.25 tons per year for regulated (criteria) pollutants for which MBARD has federal area designation of severe nonattainment.
- 2.5 tons single Hazardous Air Pollutant (HAP) per year
- 6.25 tons per year of any combination of HAPs per year, or
- 25% of any lesser threshold for a single HAP as the EPA may establish.

As shown in Table 19, the facility-wide PTE emissions for VOCs exceed 25 tons per year. The permit will include reporting requirements to meet the requirements of Rule 436.

Rule 1000 – Toxic Air Contaminants

This Rule applies to any new or modified stationary sources for which an Authority to Construct or a Permit to Operate is required pursuant to MBARD Regulation II - Permits, and which has the potential to emit into the atmosphere any TAC. Whenever a potential TAC may be subject to more than one MBARD Rule, or to more than one requirement in this rule, the requirement resulting in the least hazard to the public, as determined by the Air Pollution Control Officer, shall apply.

MBARD Rule 1000 Part 3 requires new or modified sources of toxic air contaminants (TAC) and carcinogenic toxic air contaminants (CATC) to meet the following:

- 3.1.1 The acute hazard index for any target organ or organ system due to TAC emissions from the new or modified permit unit shall not exceed 1.0 at any receptor location;
- 3.1.2 The chronic hazard index for any target organ or organ system due to TAC emissions from the new or modified permit unit shall not exceed 1.0 at any receptor location;
- 3.1.3 The cancer risk due to TAC emissions from the new or modified permit unit shall not exceed 10 in one million at any receptor location.

The TAC emissions for the three-staged natural gas boiler were estimated using the San Joaquin Valley Air Pollution Control District (SJVAPCD) SJVAPCD’s AB2588 "Hot Spots" Air Toxics Profiles for natural gas external combustion < 10 MMBtu/hr, Toxic Profile #3 (1/6/2023). A copy of SJVAPCD’s AB2588 "Hot Spots" Air Toxics Profiles can be found on the following link:

<https://ww2.valleyair.org/permitting/air-toxics-program/resources-for-regulated-facilities/toxic-emissions-inventory-plan/>

Table 21 shows the toxic air contaminant emissions for the three-staged boiler with an operating schedule of 24 hours per day, 7 days per week and 8 weeks per year.

Table 21. Three-staged boiler Toxic Air Contaminant emissions.

Pollutant Name	CAS#	Emission Factor (lb/mmcf)	Fuel Consumption (mmcf/hr)	Fuel Consumption (mmcf/yr)	Max 1-hr emissions (lb/hr)	Annual emissions (lb/yr)
Acetaldehyde	75070	4.30E-03	0.005882	7.905856	2.53E-05	3.40E-02
Acrolein	107028	2.70E-03	0.005882	7.905856	1.59E-05	2.13E-02
Benzene	71432	8.00E-03	0.005882	7.905856	4.71E-05	6.32E-02
Ethyl benzene	100414	9.50E-03	0.005882	7.905856	5.59E-05	7.51E-02
Formaldehyde	50000	1.70E-02	0.005882	7.905856	1.00E-04	1.34E-01

Naphthalene	91203	3.00E-04	0.005882	7.905856	1.76E-06	2.37E-03
PAHs, total, w/o individ. components reported	1151	1.00E-04	0.005882	7.905856	5.88E-07	7.91E-04
Propylene	115071	7.31E-01	0.005882	7.905856	4.30E-03	5.78E+00
Toluene	108883	3.66E-02	0.005882	7.905856	2.15E-04	2.89E-01
Xylenes (mixed)	1330207	2.72E-02	0.005882	7.905856	1.60E-04	2.15E-01

The prioritization score was conducted using SJVAPCD’s Prioritization Calculator (12/1/22). The prioritization calculator was updated to include the updated consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values (9/25/25)¹.

Table 22 shows the prioritization scores for the three-staged natural gas boiler based on an annual operation of 1,344 hours [(24 hr/day) (7 day/week) (8 week/yr) = 1,344 hr/yr] and nearest residential receptor of 162 meters (see Figure 1) with a receptor proximity of 1.0. As shown in the table the chronic and cancer values are less than 1.0.

Table 22. Prioritization scores – proximity factor of 1.0.

Acute	1.50E-02
Chronic	1.12E-02
Cancer	2.98E-02

As shown in Table 22, the acute, chronic, and cancer, prioritization scores are less than 1.0 and meet the

¹ Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values (9/25/2025). Accessed on April 16, 2026. <https://ww2.arb.ca.gov/sites/default/files/classic/toxics/healthval/contable09252025.pdf>

requirements of Rule 1000. A copy of the Prioritization Calculator spreadsheet is included in Attachment 2.

Health & Safety Code (H&SC) Section 42301.6 – Public Notification Requirements:

Pursuant to Section §42301.6(a), prior to approving an application for a permit to construct or modify a source that emits hazardous air emissions, and that source is located within 1,000 feet from the outer boundary of a school site, the air pollution control officer shall prepare a public notice in which the proposed project or modification for which the application for a permit is made is fully described. The notice may be prepared whether or not the material is or would be subject to subdivision (a) of Section 25536, if the air pollution control officer determines and the administering agency concurs that hazardous air emissions of the material may result from an air release, as defined by Section 44303. The notice may be combined with any other notice on the project or permit that is required by law.

MBARD protocol adopted by the board on 11/14/01 specifies the risk thresholds for public notification. If the carcinogenic risk is in excess of 1 in a million or non-carcinogenic risk is at or above the applicable Reference Exposure Levels, MBARD will do the Public Notice.

The project is not located within 1,000 feet of a school as shown in Figure 1.

Figure 1. Google Earth Pro image.

40 CFR Part 60, Subpart Dc, Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units

Pursuant to [Section §60.40c\(a\)](#), The requirements of this Subpart apply to each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989, and that has a

maximum design heat input capacity of 100 MMBtu/hr (29 MW) or less, but greater than or equal to 10 MMBtu/hr (2.9 MW). The three-staged natural gas-fired boiler has a combined heat input capacity of 6.0 MMBtu/hr and is exempt from the requirements of this Subpart.

40 CFR Part 63, Subpart DDDDD, National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters

Pursuant to [Section §63.7485](#), the requirements of this subpart apply to industrial commercial, institutional boiler and process heaters located at major source of hazardous air pollutants (HAP). The Wine Group, Inc. dba Golden State Vintners facility at 1777 Metz Rd in Soledad is not a major source of HAP emissions and is exempt from the requirements of this Subpart.

CONCLUSIONS:

The equipment has the capability to comply with all applicable MBARD rules and regulations.

RECOMMENDATIONS:

Issue the Authority to Construct with the following additional conditions:

1. No later than twenty-four (24) hours prior to start-up of the equipment, The Wine Group, Inc. dba Golden State Vintners must notify the Monterey Bay Air District (MBARD) and arrange for an inspection of the equipment during normal operation to verify compliance with MBARD Rules and Regulations. [Basis: MBARD Rule 207]
2. Annual natural gas fuel usage shall be reported to the MBARD, upon request. [Basis: MBARD Rule 207]
3. The annual natural gas fuel usage from the three-staged boiler shall not exceed **80,640 therms per year** or **7,905,856 cubic feet per year**. [Basis: MBARD Rule 207]
4. The boiler burners, Modules #1, #2, and #3, must be in compliance with the following emission requirement: [Basis: MBARD Rule 207]

Pollutant	Emission Limit (ppm @ 3% O ₂)
NO _x	≤ 20
CO	≤ 100

5. The NO_x, CO, and O₂ concentrations in the boiler exhaust discharged to the atmosphere must be measured within 90 days of start-up, using a combustion analyzer to determine compliance with Condition 4. The analyzer must be certified that it has been calibrated within the last six months before the date of use. [Basis: MBARD Rule 207]

The Wine Group, Inc. dba Golden State Vintners must notify MBARD no later than twenty-four (24) hours prior to the testing. Written results of the test shall be submitted to MBARD via email to reports@mbard.org within ten (10) days of the test completion.

6. The Wine Group, Inc. dba Golden State Vintners shall maintain a log, to record, summarize the monthly natural gas fuel usage (ft^3/month) and the volatile organic compound (VOC) monthly emissions. If the unit is not equipped with a dedicated gas meter, fuel used can be based on a maximum fuel usage rate of 5,882.3 cubic foot per hour (ft^3/hr), or a method approved by MBARD. The monthly VOC emissions shall be estimated using the monthly fuel usage and emission factor of 5.5 pounds per million cubic feet of gas (lb/MMft^3). Records shall be retained for at least five (5) years and made readily available to MBARD staff upon request. [Basis: MBARD Rule 207]
7. The sulfur content of any gaseous fuel consumed shall not exceed 50 grains per 100 cubic feet, calculated as hydrogen sulfide at standard conditions. [Basis: MBARD Rule 412]
8. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark or darker than Ringelmann 1, or equivalent to 20% opacity. [Basis: MBARD Rule 400]
9. No emissions shall constitute a public nuisance.

*** MODELOPTs: CONC ELEV RURAL ADJ_U*

*** MODEL SETUP OPTIONS SUMMARY ***

** Model Options Selected:

- * Model Allows User-Specified Options
- * Model Is Setup For Calculation of Average CONCentration Values.
- * NO GAS DEPOSITION Data Provided.
- * NO PARTICLE DEPOSITION Data Provided.
- * Model Uses NO DRY DEPLETION. DDPLETE = F
- * Model Uses NO WET DEPLETION. WETDPLT = F
- * Stack-tip Downwash.
- * Model Accounts for ELEVated Terrain Effects.
- * Use Calms Processing Routine.
- * Use Missing Data Processing Routine.
- * No Exponential Decay.
- * Model Uses RURAL Dispersion Only.
- * Option for Capped & Horiz Stacks Selected With:
3 Capped Stack(s); and 0 Horizontal Stack(s)
- * ADJ_U* - Use ADJ_U* option for SBL in AERMET
- * CCVR_Sub - Meteorological data includes CCVR substitutions
- * TEMP_Sub - Meteorological data includes TEMP substitutions
- * Model Assumes No FLAGPOLE Receptor Heights.
- * The User Specified a Pollutant Type of: OTHER

**Model Calculates 4 Short Term Average(s) of: 1-HR 3-HR 8-HR 24-HR and Calculates ANNUAL Averages

**This Run Includes: 3 Source(s); 3 Source Group(s); and 1283 Receptor(s)

- with: 3 POINT(s), including
3 POINTCAP(s) and 0 POINTHOR(s)
- and: 0 VOLUME source(s)
- and: 0 AREA type source(s)
- and: 0 LINE source(s)
- and: 0 RLINE/RLINEXT source(s)
- and: 0 OPENPIT source(s)
- and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
- and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:

- Model Outputs Tables of ANNUAL Averages by Receptor
- Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
- Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
- Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

Attachment 2:

Copy of the Prioritization Calculator for the Three-staged Natural Gas Boiler

PRIOR

Name Prioritization Calculator

Applicability	Use to provide a Prioritization score based on the emission potency method. Entries required in yellow areas, output in gray areas.		
<i>Author or updater</i>	Matthew Cegielski	<i>Last Update</i>	December 1, 2022
<i>Revisions (updated OEHHA health database to 8/18/25 version) by</i>	Armando Jimenez	<i>Revised Date</i>	September 25, 2025
Facility:	The Wine Group, Inc. dba Golden State Vintners		
ID#:			
Project #:	APP-26-00028		
Unit and Process#	Three-staged natural gas heater - 6.0 MMBtu/hr (nearest receptor - 163 meters)		

Use the substance dropdown list in the CAS# Finder to locate CAS# of substances.	
Substance	CAS# Finder
Acetaldehyde	75070

Operating Hours hr/yr	1,344.00				
Receptor Proximity and Proximity Factors	Cancer	Chronic	Acute		Receptor proximity is in meters. Prioritization scores are calculated by multiplying the total scores summed below by the proximity factors. Record the Max score for your receptor distance. If the substance list for the unit is longer than the number of rows here or if there are multiple processes use additional worksheets and sum the totals of the Max Scores.
	Score	Score	Score	Max Score	
0 < R < 100	1.000	2.98E-02	1.12E-02	1.50E-02	2.98E-02
100 ≤ R < 250	0.250	7.45E-03	2.80E-03	3.76E-03	7.45E-03
250 ≤ R < 500	0.040	1.19E-03	4.49E-04	6.01E-04	1.19E-03
500 ≤ R < 1000	0.011	3.28E-04	1.23E-04	1.65E-04	3.28E-04
1000 ≤ R < 1500	0.003	8.94E-05	3.36E-05	4.51E-05	8.94E-05
1500 ≤ R < 2000	0.002	5.96E-05	2.24E-05	3.01E-05	5.96E-05
2000 < R	0.001	2.98E-05	1.12E-05	1.50E-05	2.98E-05

Three-staged natural gas heater - 6.0 MMBtu/hr (nearest)					Enter the unit's CAS# of the substances emitted and their amounts.			Prioritization score for each substance generated below. Totals on last row.		
Substance	CAS#	MW Correction	Annual Emissions (lbs/yr)	Maximum Hourly (lbs/hr)	Corrected Annual Emissions (lbs/yr)	Corrected Maximum Hourly (lbs/hr)	Average Hourly (lbs/hr)	Cancer	Chronic	Acute
